

Cention - Medical Inventory Control Software (MICS)

Objective:

Cention's Medical Inventory Control Software (MICS) has been designed to deliver accurate Physical Inventory (PI) results and perform powerful search functions for healthcare facilities without disrupting patient care. We provide a comprehensive package to our clients that give the tools, support and training necessary to obtain the quick and accurate results needed to minimize inventory costs. Results can be viewed through Cention's highly developed web-enabled Dashboards. Through this process Clinicians can maintain a sterile environment and focus on their primary goal of patient care.

Solution:

Using this application user can download the trail or Full version of Cention Desktop application. The actual Cention is developed in MS Excel. Extending the functionality to provide Dashboard.

Description and Features:

- ❖ Handles all the known/ unknown users.
- ❖ Provides information including MAP API.
- ❖ Fast and effective Performance with Rich Look & Feel.
- ❖ Advanced scripting and Styling.
- ❖ Extensive software training & guidance, 24/7 customer support.
- ❖ Results in 5 business days after PI is completed
