

Retail Store Solutions(Stores Management System)

Objective:

The objective is to automate and integrate stores management system. Make the book information about receiving from suppliers and issuing to various departments, make an order for books and receive an order for books. When a book comes to store, how to assign the book into racks, how to retrieve the book from racks when any order comes to stores. Make the manual operations faster by automating without errors.

Solution:

This software keeps the information of books for the store and how many they have issued and how many books they have received. How many orders they need to make and which person is working on which order. When a book comes to the store, how to assign the book into racks how to retrieve the book from racks and on what basis they need to pick the book when an order comes to stores. Make the manual operations faster by automating without errors.

Benefits:

- ✦ It reduces manual transactions and increases the efficiency of the store.
- ✦ It keeps track on each and every order which comes to the store.
