

Web Application for share holder in NSE, BSE and other international Stocks

Objective:

The objective is to develop the Web environment for share holder in NSE, BSE and other related international Stocks. The main objective of the project is to provide Information on all available companies' inn stock market as state level (BSE) and National level (NSE).

Solution:

This provides all the information related to stocks for present and future needs. And we also explain the customer, regarding company shares since past one year in the form of graph. Here, we are getting information from NSE and BSE servers. The entire site is automated. Every day, we calculate the future values and tomorrow's expected values of a particular share from a company. All the formulas are based on statistical formulas based stocks.

Features:

- ❖ NSE
- ❖ BSE
- ❖ MCX
- ❖ NCDEX

Benefits:

- ❖ End user gets the perfect information.
- ❖ Expected share values (present and future) can be reached.
- ❖ Control panel for administrator is provided.
