

Online Professional Development

Objective:

The objective of the project is to design an interactive, advanced, extraordinary online learning tool for developing professionals on various programs.

Solution:

This project allows registered users to purchase a seminar or case study through online payment system and can download the PDF documents. By the time he can give the online test through online test system. Finally will get a certificate after qualifying the subject he has chosen. User can generate his report from the user panel by providing his user id and password.

Admin panel has been built to provide all the dynamic contents to the front-end. Manage the seminars, conferences, case studies, libraries. Manage the users accounts and it is membership. Manage the seminar, conference, case studies reports and transaction reports. Searching the users and all the contents is very easy.

Benefits:

- ✦ It is user friendly interface and it reduces manual work.
