

HAMZA BOOK STORE - Online Shopping

Objective:

Hamza Book Store is a online web application with os-commerce for managing all the products and online shopping of Hamza Book Store. This is also product management system to maintain all the status of products, availabilities of products, delivery of products, information about products, product pictures, new arrivals of products, popular products, released products list and special offers of products. The products available in this Hamza Book Store are i.e., Islamic Books, Quran, Handith, Audio/Mp3 Cds, Software, Educational Toys, Clothes, Gifts & more.

Differentiating products as per sections, languages, divisions, types and categories. The first one is that on every category page you will find a header which lists total # of products in the category plus the page count so that you can better keep track your shopping. If there are multiple pages you can either view them page by page or click 'Show All' to see all on one page. The second line on the header allows you to dynamically sort products according to Code, Name, Price, Arrival or by the Default method.

The second major improvement is that we have added a Product Rating & Review tool which allows you to rate a product & write a review about it. You can see others ratings on the category and product page. The full review will be on the bottom of the product page. To make the tool useful for everyone we encourage all our customers to rate & review products they own. Whenever you finish any book please login to your account, go to the product page and write a honest review.
