

PG & E WCM (Web Content Management) System

Objective:

PG& E Project is a WCM system that will provide an end-to-end Intranet Publishing Portal for the Organization internal employees with Feature News, News & announcements, Upcoming Events, Articles, and Resource Information etc.

The Intranet Portal was basically used to update all the employees within the Organization and keep updated every day with all the activities functioning in the Organization.

Solution:

The two tier Client-Server architecture is developed. The server side application will be holding the database using Lists and Libraries of SharePoint consisting of all activities details of an organization.

Benefits:

- ❖ Used to update the entire employees within the organization very easily with fewer resources.
- ❖ Site can be managed by a single Administrator with ease of user friendly updating of the site with the daily routines and upcoming events and lots more.
- ❖ Provides Rich Functionality with more advantages and used can able to access based on the permission level without permission like Anonymous access.
