

# Automatic Compliance Documentation software (ACD) - Pharma

## Objective:

To design and develop ACD, software to automate repetitive compliance documentation processes. The developed software includes usual electronic features that accelerate documentation (i.e workflows) and maintain compliance (audit trails, electronic signatures), but supports special features that genuinely automate and improve the most tedious processes. The documents such as Configuration management, requirements management, electronic test execution, corrective and preventive actions are integrated under a single platform.

## Solution:

ACD is a Web based software solution developed to manage and automate quality and compliance processes. An alternative to paper based or manual systems, ACD is both efficient and simple to use, combining the control and compliance of traditional tracking databases with the flexibility of manual systems. ACD enables users to connect and synchronize electronic content with the relevant regulations, standards or guidelines, making it easier to maintain documents up-to-date.

The ACD software includes specialized solutions that are focused on specific quality and compliance processes. By integrating and connecting the complementary solutions companies benefit from a quality process that is streamlined from end to end.

## Features:

- ❖ Keep all documents "synced" and up-to-date
- ❖ Eliminate manual paperwork and speed up documentation
- ❖ Ensure data and processes are connected
- ❖ Automatically generate and link test documents
- ❖ Real time status across all documents
- ❖ Lower costs and allow for "Proactive Compliance Management"

<b>Technologies</b>	Java, Servlets, JSP, Struts, HTML, EJB, JSF, JMS, JMX, XML, XSL, WS and JavaScript
<b>Programming languages</b>	Java
<b>Databases</b>	Oracle, Postgres, SQLServer
<b>Duration</b>	6 months
